

CODING WHAT YOU MAKE

Ribaltino

The easiest way to handle bottles, cans, tins...

The Ribaltino is a most significant contribution to the improved handling of bottles, cans, cartons, tins and the many other articles in high volume production in all parts of the industrial world.

Its design concept and its practical application are so simple and logical that any production process which needs the product's normal upright attitude to be changed can now be integrated with smooth continuous flow.

Palletising, De-palletising, Washing, Rinsing, Draining, Drying, Air-jetting, Inspection, Mixin, Coding and Labelling are just some of the operations in which the Ribaltino can be used in the bottling and packaging fields. These, and many other processes in other industries can be added to the scope of this very simple and efficient product.

The Ribaltino can be designed to give any change of attitude from upright to inverted (and vica versa) and any intermediate angle the process may need. Ribaltino can give any required sequence of attitude changes. There is no practical limit to the size, shape and nature or articles which can be handled. Any component which is already in high volume production is a likely candidate for improved efficiency with the Ribaltino in the production line. The range of applications throughout all industries is almost infinite.

Ribaltino features

- any required changes of attitude
- all shapes and sezes of container
- any operating speed
- smooth, shock-proof operation
- custom design for your product
- use with existing equipment
- simple installation
- quick change-over
- precision manufaeturing
- realistic price
- prompt despatch

Coding, marking, checking and...kindness, these are the features have made Nimax leader in Italy.

Simply at the heart of your production line: Every production line is a complex and particular system. The marking and coding machines that Nimax offers are designed to be integrated perfectly with the entire line. The extensive range of products on offer can meet all manner of technical needs, while meeting the provisions of the laws in force for the various sectors. Difficult industrial environments, disparate supports, types of characters and the reproducibility of graphical elements are, for us, not restrictions but strengths.
